1 SNAS POLICY FOR ACCREDITATION OF VALIDATION AND VERIFICATION BODIES

1.1 During the accreditation of validation and verification bodies SNAS assesses and confirms the competence of the body to perform verification and validation of environmental information according to relevant standards, regulations and normative regulations.

1.2 During the accreditation of validation and verification bodies SNAS assesses the fulfilment of the requirements of the EN ISO/IEC 17029: 2019, EN ISO 14065: 2021 Standard and relevant legislative regulations in the regulated area (Commission Implementing Regulation (EU) 2018/2067, as amended by Commission Implementing Regulation (EU) 2020/2084, Commission Implementing Regulation (EU) 2024/1321, Commission Implementing Regulation (EU) 2025/1192. The bodies seeking confirmation of competence to perform verification and validation of environmental information must meet the requirements of the EN ISO/IEC 17029: 2019, EN ISO 14065: 2021 Standard and relevant legislative regulations as specified in other relevant standards, regulations, legislative and normative regulations, mandatory application documents of international organizations associating accreditation bodies and methodical guidelines for accreditation issued by SNAS.

1.3 Witness assessments are part of the assessment of an applicant for accreditation in this field and they are performed in the form of observation of the validation and verification body during the performance of verification and validation of environmental information on the customer's premises. The condition for granting accreditation is the performance of a minimum of one witness assessment. The number of further witness assessments to be carried out depends on the scope of the requested accreditation.

1.4 After granting accreditation, SNAS performs planned surveillance every year over accredited validation and verification bodies and during the validity of the accreditation certificate it verifies whether the body keeps meeting the accreditation requirements concerning their accredited activity.

1.5 All principles concerning accreditation given above are also valid for reaccreditation of validation and verification bodies, but for reaccreditation information concerning the accredited body gained in the preceding assessments is taken into account.

1.6 An extension of accreditation of a validation and verification body is performed by SNAS in a similar way as given for accreditation.

1.7 SNAS can also perform extraordinary surveillance over an accredited validation and verification body on the initiative of SNAS or a third party or the body itself.
